

AMBIDUOCLIP SYSTEM

SCREEDED FLOOR CONSTRUCTION

ambiente®

more than underfloor

PRODUCT OVERVIEW

The AmbiDuoClip is a cost effective, hybrid solution that can be used where AmbiTak is the preferred option but the insulation board is either not deep enough to allow the pipe to be securely held with tacker clips alone or where the insulation is a PUR type board which lacks the required density to hold the clips in place.

In these situations, AmbiClip can be used in combination with AmbiTak. The cliprail is usually installed at double spacing and will provide a secure hold for the pipe, especially at loop-heads, while the tacker staples will help to minimise installation costs.
