

AMBIPLATE 80 SERIES

ambiente[®]

more than underfloor

Timber flooring

Aluminium heat diffuser plate
(Fitted either between joists or over joists)

17mm UFH pipe

Suspended timber floor joists

Minimum 100mm Rockwool type insulation

PRODUCT OVERVIEW

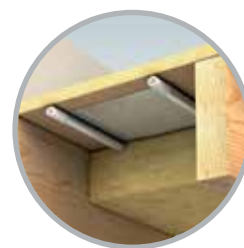

The AmbiPlate 80 system is another member of the AmbiPlate range, allowing installation of the system from underneath - ideal for retro-fit scenarios when the floor finish is already in place (section A opposite)

The system can also be fitted from above, where the plates are laid across the floor joists (section B opposite).

It is important as with all plated systems that that joist void is well insulated - normally 100mm of mineral wool type insulation.
