

# AMBIENTE TM4-TS

## FOUR CHANNEL TOUCHSCREEN TIMECLOCK 230V

ambiente®

more than underfloor

### PRODUCT OVERVIEW

A timeclock is a programmer that has ON and OFF times that can be set for different items of control and works by storing times set by the user to control parts of a heating system in according to the time of the day/week. Our 4 channel timeclock allows you to control up to 4 zones of heating – for example you might have four zones: Ground floor UFH, First Floor UFH, Bathroom Towel Rads, Hot Water.

The timeclock is designed to work with the relevant Ambiente wiring centre but can equally be used as a standalone timeclock.

The Ambiente touchscreen timeclock option is neat and functional with easy to use touchscreen controls.
