

System overview

The Ambiente universal primer is the perfect fit for floor preparation and priming dusty floors prior to laying of following floor layers such as AmbiFibre Pro levelling compound or AmbiBond.

The coloured primer is simple to use and easy to see where you have and haven't applied due to the blue pigment that's been added to the product.

To ensure a good bond is achieved, the subfloor must be stable and ready to receive the following floor layers.

Benefits

- Coloured (blue) for visibility
- Non hazardous
- Tried and tested with Ambiente products
- Each bottle covers 150 - 200m²
- Mix with water

AmbiFibre Pro levelling

AmbiFibre Pro levelling compound can be used to level up existing floors and level over the top of UFH systems such as AmbiDeck 18, AmbiDeck 20, AmbiDeck 20 Pro, AmbiSolo etc

Priming the floor prior to use will enhance the flow workability of the AmbiFibre Pro as less moisture will be absorbed by the floor surface when the levelling is applied.
